

IBD Fundamentals: From Theory to Practice

MODULE OVERVIEW

Build the knowledge and confidence needed to deliver effective IBD care with this two-part education module.

Part 1 provides exclusive, self-paced online learning covering core IBD principles, treatment approaches, and the wider impact on patients.

Part 2 is an immersive face-to-face weekend where you apply your learning through practical exercises, case discussions, and communication skills development.

This module is suitable for new IBD nurses and experienced IBD nurses as a refresher course.

- ✓ Build a robust understanding of IBD, including underlying mechanisms and treatment pathways
- ✓ Understand the patient journey and lived experience
- ✓ Apply clinical knowledge to real-world scenarios
- ✓ Communicate IBD information clearly and compassionately
- ✓ Develop treatment plans aligned with clinical guidelines and team-based care

Register now

Places are limited to 12-15 per course, so don't miss out on your chance to build your knowledge and confidence in IBD now. To register visit www.LOGIC-Tillotts.co.uk/education

PRE-PROGRAMME

- Before the weekend, having completed the Part 1: e-learning modules, you will consolidate with a reflective exercise, based on the RCN four pillars of nursing practice. This will help you clarify your current strengths, identify areas for growth, and define what you want to gain from the weekend.

FRIDAY EVENING – *Connect and Settle in*

- A relaxed, informal evening where you'll meet your fellow nurses, your nurse tutor and skills trainer.
- You'll ease into the programme with a fun, interactive session designed to refresh and consolidate your IBD knowledge, setting a positive, energising tone for the weekend ahead.

SATURDAY – *Building Confidence in Practice*

- A full day focused on real life patient scenarios to help deepen your confidence and clinical judgement.
- You'll consolidate your knowledge, understand key medications, and strengthen your communication and consultation skills to support effective patient outcomes.
- The day provides space to practice, reflect, and learn from the experience and insights of the group.

SUNDAY – *Bringing It All Together*

- Working in small groups, explore a detailed patient case, develop and present your plan of care, and role play elements of the consultation.
- Reflect on your autonomous practice goals and set clear intentions for how you want to move forward with greater clarity and confidence.

FOLLOW-UP SUPPORT

- After the weekend, you'll join a virtual MDT style clinical practice clinic, where you can discuss a current case and gain further support from the course trainers and fellow participants. Embed your learning, strengthen decision making, and continue developing confidence in your autonomous practice.

**Opportunity to
network with fellow
IBD nurses.**

**Fully-funded with
overnight accommodation
and appropriate
travel reimbursed.**

**Case studies and
interactive sessions
to enhance learning.**
